

A Carriage to Travel without **H O R S E S.**

THE Proprietors of this Extraordinary MACHINE, respectfully inform the NOBILITY, GENTRY, and others, that they purpose to exhibit it at the

Royal-Circus, St. George's-Fields,

From Eleven to Twelve, from Two to Three, and from Four to Five o'Clock, every Day (Sundays excepted) till the 25th of this Month, and no longer.

The Curious in Mechanism have now an Opportunity of seeing the greatest Piece of Invention ever yet discovered. All who have scrutinized into the Powers of this Wonderful Machine have expressed the greatest Satisfaction and are convinced it is not to be equalled.

The Proprietors, from many Solicitations from Gentlemen in this Metropolis, have thought proper to indulge the Public for a few Days with a View of their Invention, and they have no Doubt but that they shall gain Universal Applause by it; but as they cannot stay long in Town, they humbly hope that such of the NOBILITY, GENTRY, and others, as shall be pleased to do them the Honor of looking at their Machine, will apply early.

Properties of the *Machine*.

It weighs as much as any modern Stage Coach; it moves either slowly or swiftly, up Hill or down Hill, without the Assistance of Horses, even when the Wheels are blocked up; it turns round by locking in a new Method, and to a much greater Nicety than any other Vehicle.---In a word, whatever Wheel Carriages perform by the Assistance of Horses, is in this accomplished by Mechanical Powers only.---ADMITTANCE 2s. 6d. EACH PERSON.

KEMMISH, PRINTER, NO. 61, KING-STREET, BOROUGH.

Saw this catch penny Imposition the 16th May 1789. It was very shrewdly executed by a man concerned in the Service and no Part of the Mechanism exposed to view so as to enable one to judge of its Principles. A.D.
